1853. ALLEN BLOCK. 1894.

Noble Addition to the Mercantile Architecture of Honolulu

Description of the New Quarters of the Old Firm of Allen & Robinson.

Honolulu has received an addition to its mercantile architecture which is an ornament to the business quarter. This is the Allen block on Queen street, upon the site of the lately demolished wooden building, which for a great many years was a landmark on the city front. It is of three stories with a height of fifty-six feet and ground dimensions, in round numbers, of 70 feet front by 60 and 50 feet depth. The different depths are due to the rear corners being cut out, making the middle part of the building project back. There are three self-contained divisions in the structure, each having three floors connected by both stairs and elevator. Each division is thus designed for a large mercantile establishment, having salesroom and offices on the ground floor and two warerooms on the upper floors. The building is of brick with 17-inch walls. Its front is very handsome, being of plate glass with iron pilasters for the first story, and pressed brick with terra cotta trimmings for the upper stories, the windows of the third one being circular-headed. Steel girders are used in the front and the building is of concrete foundations, three feet wide

entrance to the store, and is fitted with iron shutters. There are two safe stands built of concrete resting on the solid coral inside of the office space, which is separated from the store space by counters. The elevator is on the inner side and not enclosed, but in the other stores the elevators run in shafts. Recesses under the store counter on the outside are used to hold assorted nails. Shelving and wall paper racks occupy all the available space on the sides of the store, and are designed to afford the greatest possible facilities for assorting the goods. Besides the plate glass front the lighting of the store is amply effected by one mullion and one single window on the side and the same on the rear. Under the stairs in the office is a marble wash basin, which is also provided in the corresponding place in each of the other divisions. The counters are of tasteful designs in Spanish cedar and nor-west pine, the same woods being used in all the other fittings. A speaking tube communicates with the upper flats.

and five feet deep, resting on the solid coral. The double doors of 2 inch plate glass are 10 feet high by 6 feet wide, and are fitted with real bronze locks costing \$8 and hinges \$2.50 each, also having a concealed bolt that will hold the door in any position desired. The front windows of the store on the south side are 8 ft. high by 6 ft. wide, with a transom 4 ft. by 6 ft. Those of the other stories are 8 ft. by 8 feet, with transom 4 ft. by 8 ft. There is an awning over the first story front, with moulded gutter of galvanized iron.

The ornamental work on the front is elaborate, and is understood by those acquainted with architecture from the following particulars: In terra cotta there are moulded cornices, scroll stop block, jack arches, scroll panel, sill course and ornamental frieze. There are besides moulded medallions, scroll capital, pressed brick pilasters and piers. The illustration accompanying this article will explain more to the ordinary reader than technical details. The terra cotta was furnished by Gladding, McBean & Co. of San Francisco. Charles Gladding was the architect of the building. He has had thirty years' experience in his profession at San Francisco, in that long period making the plans of a large proportion of the finest buildings in that metropolis of the Golden West.

Allen & Robinson, dealers in coal, lumber and builders' supplies, occupy the south store. The others are not yet occupied. A description of this store will suit that on the north side, excepting that the latter is wider by three feet. The store is 21 ft. 6 in. front by 60 ft. deep, with a 10 ft. long hallway leading to the rear entrance, an arched door with iron shutters. This hallway is in the projection before mentioned, and the corresponding spaces in the upper stories form recesses, each with a window in the side and one in the rear, back of the head of the stairs. There is a window in the side of the hallway, so that it has plenty of light when the rear door is closed. An arched door gives a side

From here a splendid expanse of scenery is opened to the view, taking in Barber's Point, Ewa plantation, Pearl Harbor, the various mountain ranges, Punchbowl, Diamond Head, the Pacific Ocean, and every part of the city. Six faucal ventilators thrust their swinging mouths through the roof, there being two of them for each division of the block. It is said to be the best ventilated as well as the best lighted building in Honolulu.

A minute description of the two unoccupied divisions of the building is unnecessary after the foregoing details. The middle division is the largest and of course has no sunlight from the sides. In other respect its arrangements and equipments, excepting the variations already noted, are the same as those of the others. The ceiling of all the first story is of lin-xin, tongued and grooved redwood, while that of the other stories is of lath and plaster. The building is wired for both light and power, and the elevators are geared for running by electric motor, although workable by hand.

From top to bottom of the building there is not a flaw discernible in either material or construction. Everything seems to be well-seasoned and of the best selection in the one case, and well and truly fashioned and joined in the other. There is no gingerbread work but there is a finished appearance about every part of the construction. Lucas Brothers, proprietors of the Honolulu Planing Mill, erected the building, Thomas H. Lucas having been in constant supervision of all the details. That establishment has for a great many years been famous for the quality of its work in the building line, but it is doubtful if it has ever produced a fabric superior to the Allen block.

Miniature Art.

At Williams' Studio are to be seen Portraits on Watch Dials, which he is making a specialty of. Lantern Slides for lecture by the set or dozen.
